PROFESSIONAL SUMMARY

Aspiring Cloud & DevOps Engineer with a solid foundation in Computer Science and hands-on expertise in AWS cloud infrastructure, Linux system administration, Docker containerization, Kubernetes orchestration, and Infrastructure as Code (IaC) with Terraform. Experienced in orchestrating multi-container production deployments, configuring reverse proxies, building automated CI/CD pipelines via GitHub Actions, and scripting proactive monitoring solutions using Python and Bash.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, S3, IAM, VPC, RDS, DynamoDB, CloudWatch, Route 53)

DevOps & IaC: Docker, Kubernetes, Terraform (IaC), GitHub Actions (CI/CD), Helm, Git, SSH

Monitoring & Linux: Prometheus, Grafana, AWS CloudWatch, Ubuntu Linux Administration, Bash Scripting

Automation & Languages: Python, Bash Shell Scripting, Java, C/C++, SQL

Networking & Security: TCP/IP, DNS, HTTP/HTTPS, SSL/TLS, Security Groups, IAM Policies, VPC Peering

Web Servers & Storage: Nginx, Gunicorn, MySQL, MongoDB, Redis, Persistent Docker Volumes

EXPERIENCE

Hybrid Application Development Intern | DK TECHNOS - *Flutter | Dart | Firebase | Mobile Application Development*

• Developed hybrid mobile applications using Flutter and Dart, implementing responsive and user-friendly application interfaces.

• Built and integrated application features using modular and reusable development practices.

• Integrated Firebase services for application backend functionality and data management.

• Debugged application issues, tested features, and improved application functionality throughout the development lifecycle

PROJECTS

Production-Style Django Deployment | *AWS EC2, Docker Compose, Nginx, MySQL, GitHub Actions*

github.com/yashraj-1012/django-notes-app

- **Containerized Orchestration:** Orchestrated a 3-tier production application (Django, MySQL, Nginx) using Docker Compose on an AWS EC2 instance, reducing local-to-cloud deployment setup time by 45%.
- **Web Server & Traffic Routing:** Configured Nginx as a reverse proxy coupled with Gunicorn WSGI server on port 80, optimizing static asset caching and handling concurrent HTTP requests with sub-100ms response times.
- **Data Persistence & Reliability:** Implemented custom bridge networks, automated health check policies, container auto-restart, and dedicated persistent Docker volumes for zero data loss across MySQL restarts.
- **CI/CD & Troubleshooting:** Engineered a GitHub Actions CI pipeline automating code linting and Docker image builds on every git push; resolved container DNS resolution and IAM permission bottlenecks.

Real-Time System Health Dashboard | *Python, Linux Kernel Subprocesses, Bash, AWS EC2, CloudWatch*

github.com/yashraj-1012/health-dashboard

- **Resource Monitoring Tool:** Developed a zero-dependency CLI diagnostic dashboard monitoring real-time CPU load, memory utilization, disk I/O, and systemd service availability on AWS EC2 Ubuntu instances.
- **High-Performance Execution:** Leveraged Python's native subprocess module to poll kernel metrics with <1% CPU overhead, presenting dynamic ASCII progress bars and color-coded threshold alerts.
- **Cloud Security & Provisioning:** Provisioned the host EC2 instance adhering to the principle of least privilege using customized AWS IAM roles and fine-grained Security Group ingress/egress rules.

github.com/yashraj-1012/terraform-multi-environment

Multi-Environment AWS Infrastructure | *Terraform, AWS, EC2, Github*

- **Infrastructure as Code:** Built reusable Terraform infrastructure to manage AWS EC2 resources across separate Development, Staging, and Production environments.
- **Reusable Modules:** Developed a parameterized EC2 Terraform module with configurable AMI, instance type, environment, project name, and outputs to reduce configuration duplication.
- **Environment Management:** Implemented independent environment configurations and Terraform plans for controlled and consistent infrastructure changes across Dev, Staging, and Prod.
- **Version Control:** Managed infrastructure code with Git and GitHub using Terraform provider lock files, .gitignore controls, and environment-specific .tfvars.example templates.

Automated Server Log Monitor & Alerting | *Python, Bash, Linux Cron, Git* github.com/yashraj-1012/Server-monitor

- **Automated Parsing Pipeline:** Built an automated log analysis utility that ingests Linux system logs, classifies entries by severity (INFO, WARNING, ERROR, CRITICAL), and outputs structured summary reports.
- **Cron Scheduling & Automation:** Created a production-ready Bash automation wrapper scheduled via Linux cron jobs to perform automated log rotation and hourly anomaly scans, cutting manual log review time by 75%.
- **Version Control & Modular Code:** Maintained modular scripting architecture with Git branch-based workflow, comprehensive error handling, and structured documentation.

EDUCATION

MIT College of Railway Engineering and Research, Barshi — Expected 2027

Bachelor of Technology in Computer Science and Engineering (Pursuing 4th Year)

V.V.P. Polytechnic, Solapur — 2024

Diploma in Computer Engineering **| Aggregate: 82%**

CERTIFICATIONS & KEY COURSEWORK

- **Cloud & DevOps Core Curriculum:** Hands-on implementation of AWS core compute/storage/networking, Docker containerization, Kubernetes cluster deployments, and Infrastructure as Code (IaC) with Terraform.
- **AWS Skill Builder – Well-Architected Solutions** | Amazon Web Services (AWS) — Course Completed, October 2026
- **Technical Foundations & Systems:** Operating Systems, Linux System Administration, Computer Networks, Database Management Systems (DBMS), Data Structures & Algorithms.
- **Certification in Application Development:** Completed Certified Program in Mobile & Hybrid Application Development.
